

# GUIDE TO FILTERS IN YOUR HOME

Dirty or clogged filters reduce efficiency and shorten the life span of your appliances.

There are more filters in your home than you probably realize. Here are the filters every homeowner should know about – including how often to service them and whether they need replacing or just cleaning.

## 7 FILTERS EVERY HOMEOWNER SHOULD KNOW ABOUT

### HVAC / FURNACE FILTER

DISPOSABLE — REPLACE

Every 1 – 3 Months

Arguably the most critical filter in your home. Traps dust, allergens, and debris circulating through your air system. Neglecting it leads to reduced efficiency, poor air quality, and costly HVAC repairs.

### WASHING MACHINE FILTER

CLEANABLE

Every 3 – 4 Months

Found in approximately 50% of washing machines. Catches lint, coins, and debris.

### RANGE HOOD FILTER

CLEANABLE

Every 3 Months

Captures grease and smoke from cooking. Reduces fire hazard risk and keeps kitchen air clean.

### FRIDGE WATER FILTER

DISPOSABLE — REPLACE

Every 6 Months

Improves drinking water by removing contaminants and sediment from your water supply.

### DISHWASHER FILTER

CLEANABLE

Every 1 – 2 Months

Prevents food debris from clogging the drain. Keeps your dishwasher odor-free and cleaning properly.

### DRYER LINT FILTER

CLEANABLE

Every Load

One of the most important filters in your home. Reduces fire risk and increases energy efficiency.

### DEHUMIDIFIER FILTER

CLEANABLE

Every 3-6 Months

Filters dust and debris out of the air as relative humidity is managed within the home.

**PRO TIP: SET RECURRING CALENDAR REMINDERS FOR EACH FILTER — IT TAKES MINUTES BUT CAN SAVE THOUSANDS IN REPAIRS.**
